

CS11-731
Machine Translation and
Sequence-to-Sequence Models
Monolingual Transduction

Graham Neubig

Carnegie Mellon University
Language Technologies Institute

Site
<https://phontron.com/class/mtandseq2seq2019/>

(Slides by Graham Neubig and Antonis Anastasopoulos)

Examples

- Summarization
- Paraphrasing
- Formality

Summarization

- Granularity:
 - Sentence compression
 - Single document summarization
 - Multi-document summarization
- Type:
 - Abstractive
 - Extractive

Sentence Compression

- Reduce sentence length
- Common setting: first sentence in new article to title

Abstractive Sentence Summarization with Attentive Recurrent Neural Networks

Style and Attribute Transfer

- What is style? a subset of "linguistic variation"

Variation (linguistics)

From Wikipedia, the free encyclopedia

Variation is a characteristic of language: there is more than one way of saying the same thing. Speakers may vary pronunciation ([accent](#)), word choice ([lexicon](#)), or morphology and syntax (sometimes called "[grammar](#)").^[1] But while the diversity of variation is great, there seem to be boundaries on variation – speakers do not generally make drastic alterations in sentence word order or use novel sounds that are completely foreign to the language being spoken.^[2] Linguistic variation does not equate with language [ungrammaticality](#), but speakers are still (often unconsciously) sensitive to what is and is not possible in their native [lect](#).

Supervised Transfer

- Just train an MT model!
